Bathing: excellent ratings for Maggiore, Monate, Ceresio and Ghirla

Pubblicato: Martedì 9 Giugno 2015

Twenty-five are excellent, three are good and one is sufficient. Nothing to be done, however, for the lakes of Varese and Comabbio.

The water analysis performed last April by **biologists of the Local Healthcare Authority of Varese** confirmed a **bathing similar to last year**. At the end of four years of continuous sampling, therefore, we move towards the official promotion of a good part of Lake Maggiore, all of Monate, the lake of Ghirla and some points of Lake Lugano.

The umpteenth failure of Varese and Comabbio instead, suggests an end to the dream of seeing bathing waters, unless there are major interventions to restore a bacteriological balance.

To note also the negative situation that persists in **Porto Ceresio** and the discrete quality of the River Ticino in Sesto Calende.

Map of the bathing beaches

Here is the list of sites with the indications shown on the Local Health Authority website, remembering that the parameters extend to adjacent areas:
